

Att FCC

I am a truck driver, and this information that xm radio is broadcasting weather and traffic information in large cities is one of the best things that has happened in my job. I can avoid accidents in metropolitan areas because the information comes very quickly and constantly. I can take alternate routes to avoid it and that way I am not blocking or slowing down emergency equipment and first responders. It is a safety issue that should be considered before passing this law.....Thank You.....Billy J Norman
